Introduction

How to Read this Book ix

1 I tell a friend that my job is more fun than you'd think: What is statistics? 1

Describing Data

2 So Bill Gates walks into a diner: On means and medians 4

3 Bill Gates goes back to the diner: Standard deviation and interquartile range 7

4 A skewed shot, a biased referee. 12

5 You can't have 2.6 children: On different types of data 16

6 Why your high school math teacher was right: How to draw a graph. 21

Data Distributions

7 Chutes-and-ladders and serum hemoglobin levels: Thoughts on the normal distribution 26

8 If the normal distribution is so normal, how come my data never are? 32

9 But I like that sweater: What amount of fit is a "good enough" fit? 37

Variation of Study Results: Confidence Intervals

10 Long hair: A standard error of the older male 41

11 How to avoid a rainy wedding: Variation and confidence intervals 46

12 Statistical ties, and why you shouldn't wear one: More on confidence intervals 50

Hypothesis Testing

- 13 Choosing a route to cycle home: What p -values do for us 54
- 14 The probability of a dry toothbrush: What is a p -value anyway? 57
- 15 Michael Jordan won't accept the null hypothesis:
How to interpret high p -values 61
- 16 The difference between sports and business: Thoughts
on the t test and the Wilcoxon test. 64
- 17 Meeting up with friends: On sample size, precision and
statistical power 70

Regression and Decision Making

- 18 When to visit Chicago: About linear and logistic regression 77
- 19 My assistant turns up for work with shorter hair: About
regression and confounding 84
- 20 I ignore my child's cough, my wife panics: About specificity
and sensitivity 90
- 21 Avoid the sales: Statistics to help make decisions 95

Some Common Statistical Errors, and What They Teach Us

- 22 One better than Tommy John: Four statistical errors, some
of which are totally trivial, but all of which matter a great deal 99
- 23 Weed control for p -values: A single scientific question
should be addressed by a single statistical test 102
- 24 How to shoot a TV episode: Statistical analyses
that don't provide meaningful numbers. 105
- 25 Sam, 93 years old, 700 pound Florida super-granddad:
Two common errors in regression 110
- 26 Regression to the Mike: A statistical explanation
of why an eligible friend of mine is still single 116
- 27 OJ Simpson, Sally Clark, George and me: About conditional
probability. 119
- 28 Boy meets girl, girl rejects boy, boy starts multiple testing 124

29	Some things that have never happened to me: Why you shouldn't compare p -values	130
30	How to win the marathon: Avoiding errors when measuring things that happen over time	133
31	The difference between bad statistics and a bacon sandwich: Are there "rules" in statistics?	139
32	Look at your garbage bin: It may be the only thing you need to know about statistics.	142
33	Numbers that mean something: Linking math and science	147
34	Statistics is about people, even if you can't see the tears.	151
	Discussion Section Answers	154
	Credits and References	209
	Index	211
